

## OUR TECHNICAL SERVICES

We provide a wide range of specialized offerings with hands-on experience in a number of industries using advanced tools that we employ in our projects.

The areas of our expertise include:

**Custom software development and integration.** We offer a full range of software development services including system integration, implementation, consulting, project management, design, programming, testing, and support.

**Code optimization of your application and database.** In terms of database and application modules we offer you optimized software execution speed, including platform enhancement of time-critical sections in code.

**Image storage, administration, archive and complex search.** Editing, modifying, storing, archiving and enhancing all kind of image, video and voice data in a secured way. Our software offers complex search, efficient retrieve, advanced filtering and other capabilities to administer and manage big number of images from various image sources.

**Image, video data analysis and reporting.** System integration and turn-key automated analysis solutions; handling and processing high number of images with built-in reporting and data mining functionalities. Also offering the possibility to build your custom made reports in an easy and intuitive manner.

**Software interfaces to imaging devices.** Data and image API programming in different languages, running against various databases on either MS-Windows or Linux platforms.

**Visualization.** Recording, play/replay and synthesis of regular and streaming video; developing Internet applets using video streams, titration, and compression; video data transfer via telephone and cable lines.

**Complete and integrated camera hardware set.** Integrating popular Gigabit digital camera solutions into our IT-Imaging software management system to manage your image data with browser-only forms and no local software installation or no local admin needs.

**Cloud solutions and hosting of applications.** Offering and hosting complete applications including infrastructure for high availability of data and full system management.

**On-line archiving of imaging data.** Archiving and maintaining your old image data with instant availability and access in a secure manner.
